Tanmay-Thanvi

Summary

Backend Engineer with 2+ years of experience designing and building scalable backend services, distributed systems, and data platforms. Experienced in Java, Spring Boot, GraphQL, Golang, Kafka, Redis, and large-scale data processing, with a strong focus on API design, system performance, scalability, and backend architecture.

Education

BE - Computer Engineering

2020 - 2024

Pune Institute of Computer Technology (PICT)

CGPA: 9.1

Technical Skills

Languages : Java, Go, Python, SQL

Backend : Spring Boot, Microservices, REST APIs, GraphQL, FastAPI

Data & Infrastructure : Kafka, Redis, Airflow, Spark, MySQL, PostgreSQL, MongoDB

Cloud & DevOps : Docker, Kubernetes, Git

AI : OpenAI, LLMs, RAG, MCP, LangChain, LangGraph

Experience

DeepIntent

Aug 2024 – Present

Software Engineer

Pune, India

- Owned the design and development of the **Media Packages** platform, building GraphQL APIs and CDC-based synchronization using **Debezium**, supporting **1,031+ active campaigns**.
- Engineered the **Publisher Intelligence Platform**, processing **5M+ publisher records daily** with Apache Airflow and exposing APIs serving **200K+ publishers**.
- Built a platform-wide **distributed tracing** solution using **OpenTelemetry**, enabling end-to-end request visibility across GraphQL APIs, databases (MySQL, ClickHouse), Redis, and external HTTP services with centralized observability through Grafana, Tempo and Loki.
- Developed backend workflows for the **AI-powered Campaign Alerting Platform (Daksh)**, processing Kafka events across **4,930+ campaigns** and integrating **OpenAI** with Slack for contextual alerts.
- Designed a distributed **Redis-based API Gateway Rate Limiter** improving platform stability and performance.

PubMatic

Jan 2024 – Jul 2024

Software Engineer Intern

Pune, India

- Developed the **Synchronizer** service for PubMatic's DSP **Activate**, preloading feature flags into **Aerospike** to eliminate runtime lookups and improve bidding workflow efficiency by **50%**.
- Engineered an asynchronous caching pipeline using **Aerospike** to reduce bidder latency by moving **ADM generation** and **Tagalong delivery** outside the critical request path.

Projects

Centralized Configuration Management Platform | Java, Spring Boot, Redis, MySQL, Vault

[Github](#)

- Built a centralized configuration management platform for microservices with dynamic configuration updates, versioning, and environment-specific overrides.
- Integrated Redis caching and HashiCorp Vault for secure secret management, reducing configuration lookup latency while simplifying service onboarding.

GraphQL MCP Adapter | Python, FastAPI, FastMCP, GraphQL, SQLite

[GitHub](#)

- Built a generic MCP server exposing **1,100+ GraphQL operations** across **28 microservices** via automatic schema discovery and SQLite-backed caching, reducing startup time from **2+ minutes** to **1 second**.

Achievements & Activities

- Received the **Astonishing Avengers Award** at DeepIntent for leading an API squad to successfully design and deliver the backend for the **Media Packages** platform.
- Solved **200+** Data Structures and Algorithms problems with a **1500+** LeetCode rating.
- Winner – **SudoCode Hackathon 2022**; Runner-up – **DevHeat Hackathon** (IIIT Surat).
